

SEAC⁴RS Remote Sensing Observations: AirMSPI

Spectral bands: 355, 380, 445, 470*,
555, 660*, 865*, 935 nm
(*polarimetric)

Two Types of Sampling: Step-and-
Stare and Continuous Sweep

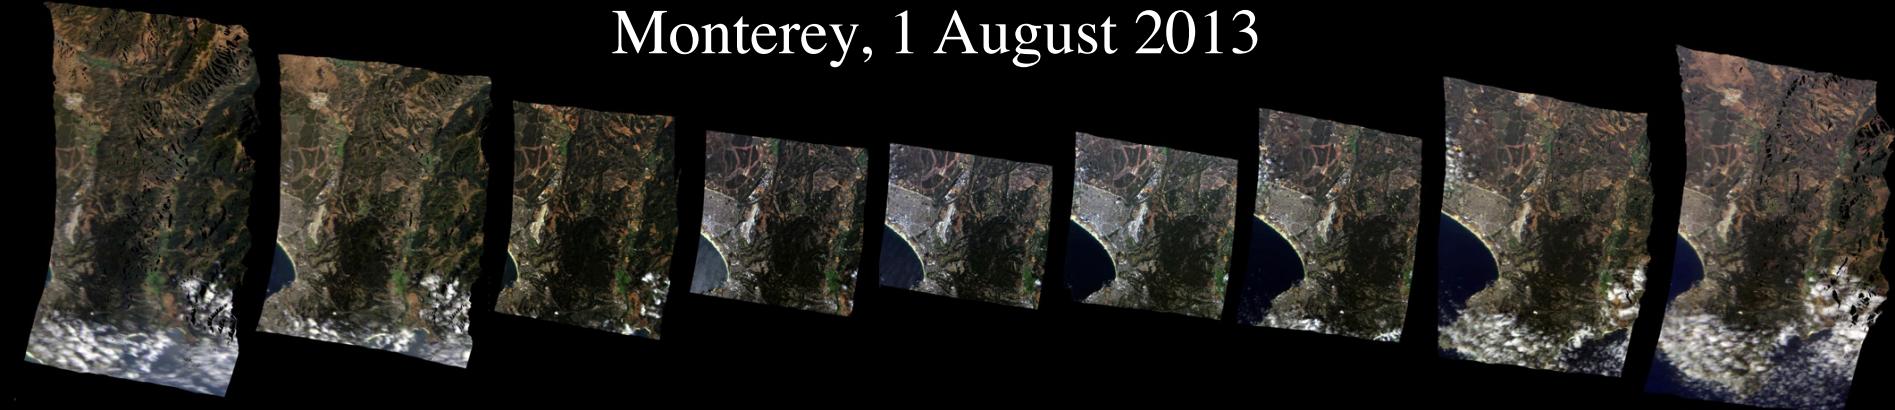

Flying in the nose of NASA ER-2

Has flown since Oct 2010

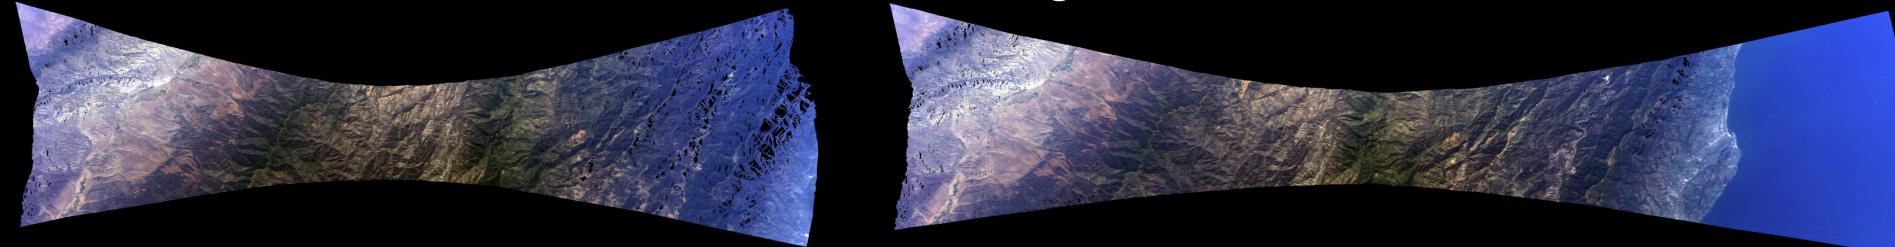

Multi-angle viewing between $\pm 67^\circ$
using single-axis gimbal

AirMSPI DATA Status

Monterey, 1 August 2013

Santa Barbara, 1 August 2013

SEAC⁴RS Level 1B2 imagery is publicly available at the NASA Langley ASDC

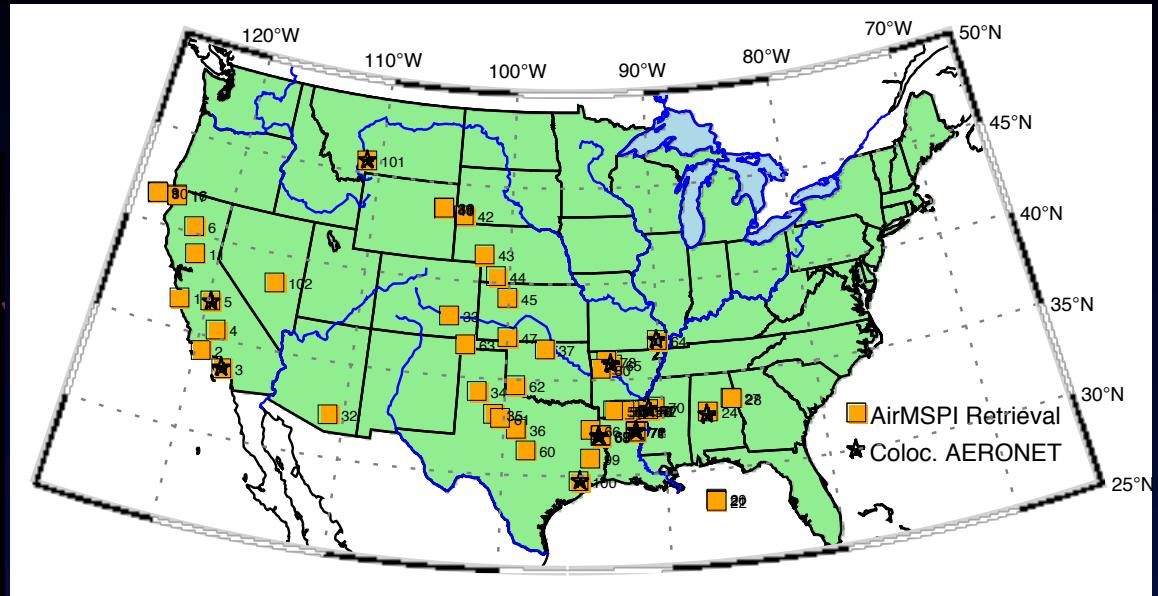

https://eosweb.larc.nasa.gov/project/airmspi/airmspi_table

- Steady improvement in radiometric, polarimetric, and geometric calibration
- Ellipsoid (mean sea level) and terrain projected
- Complete SEAC⁴RS dataset will be reprocessed in CY 2015

AirMSPI Collocations With Aeronet & DC-8

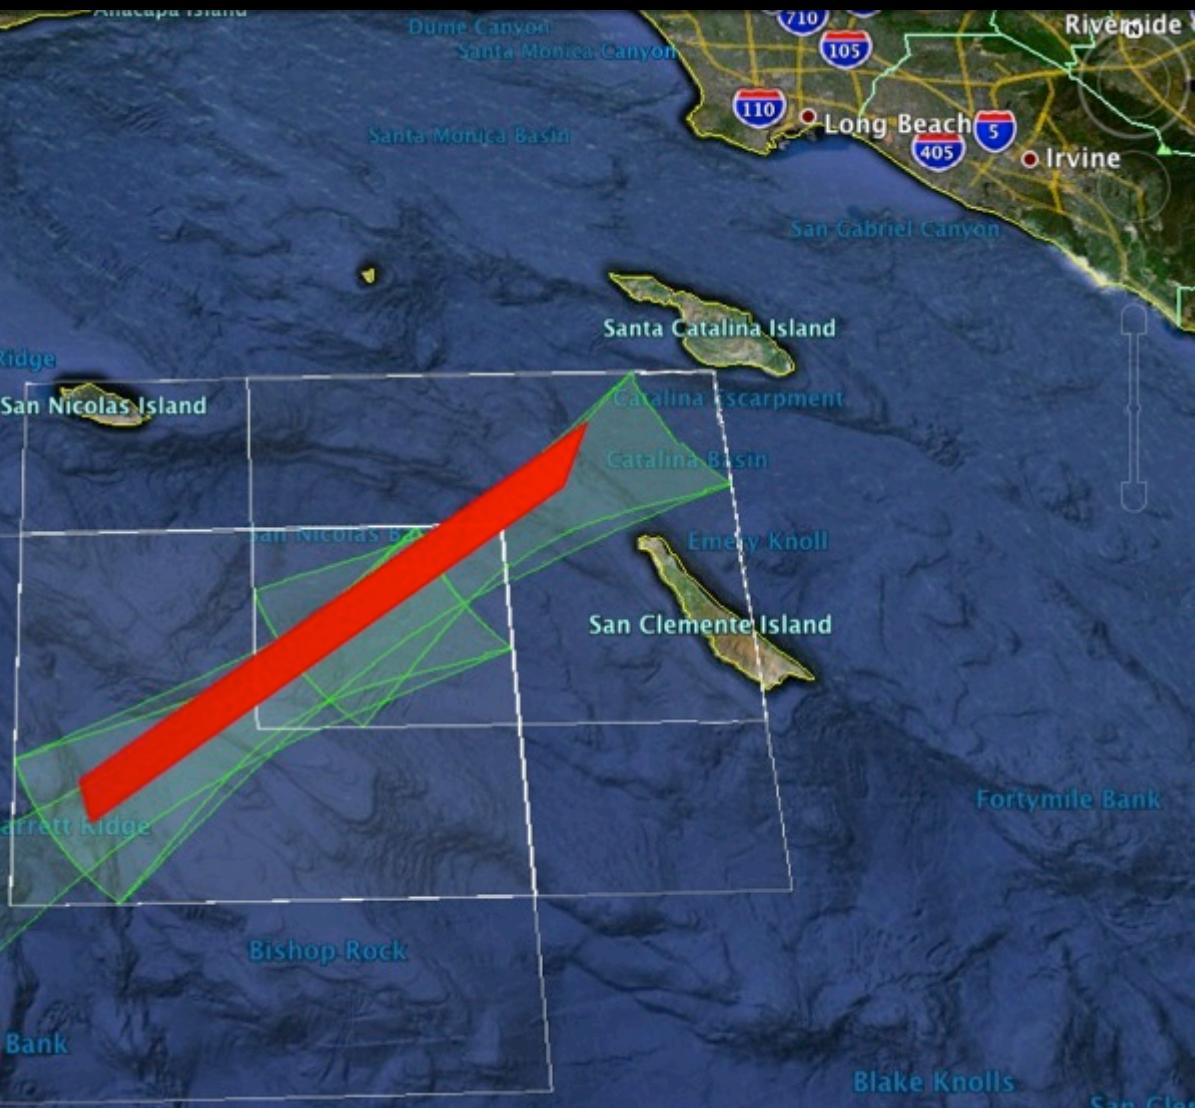

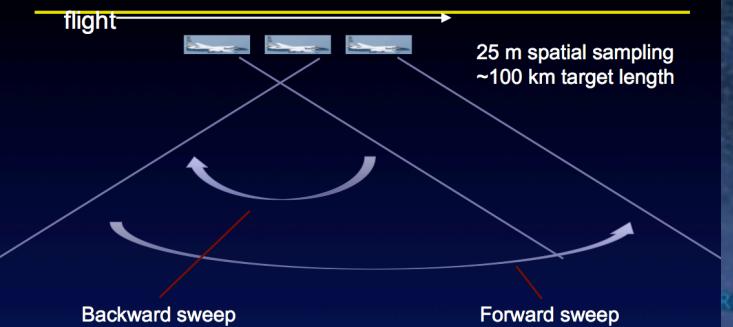

August 18, 2013
Fowler at 19:06:12Z

- AirMSPI step-and-stare images collocated with DC-8*: 17
- Aerosol-relevant AirMSPI sweeps collocated with DC-8*: 7
- Total SEAC⁴RS AirMSPI-AERONET collocations*: 18

*few to no clouds

AirMSPI sweeps

AirMSPI Unconstrained Aerosol Retrieval Approaches

- JPL-developed RT code used as basis of aerosol retrieval algorithm, with support from Oleg Dubovik (Univ. of Lille)
- GRASP code is being used / evaluated in parallel

	JPL code (ocean, land)	GRASP (ocean, land)
Forward RT calculation method	Markov Chain + Doubling/Adding	Successive Orders of Scattering
Aerosol size model	Multi-bin, bimodal	Multi-bin, multi-modal*
Particle shape	Spherical	Non-spherical implemented
Refractive index	Different for each mode	Same for all modes
Land surface model	Modified RPV + Fresnel microfacet distribution	RPV + Maignan model
Ocean surface model	Cox-Munk + bio-optical	Cox-Munk*
Language	Matlab (for development), C++*	Fortran
Optimization approach	Multi-Patch retrieval algorithm (Dubovik, 2011)	Multi-Patch retrieval algorithm (Dubovik, 2011)

GRASP vs. Markov Chain

GRASP code

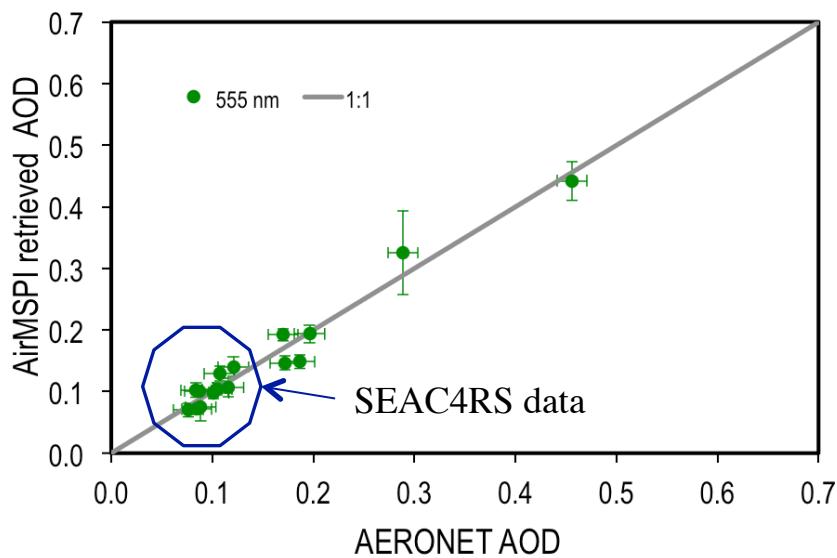

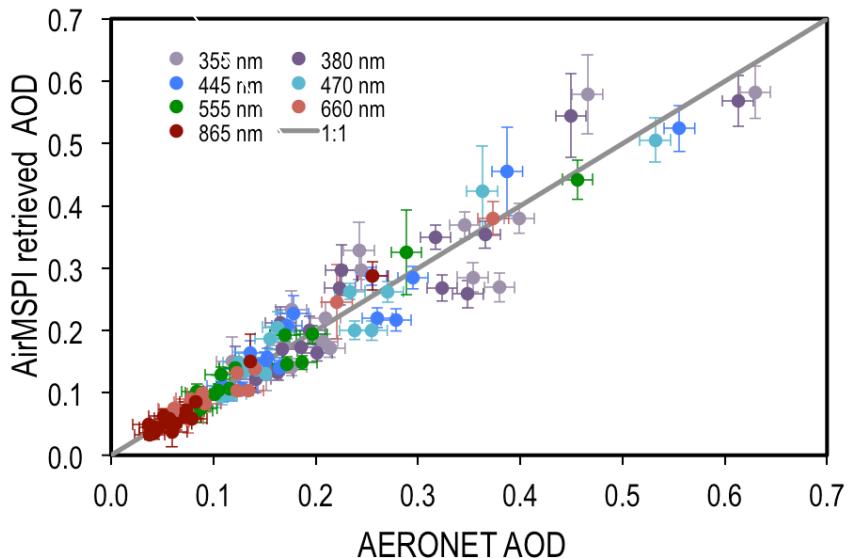

JPL code

AirMSPI aerosol retrievals (Markov-Chain JPL code)

Cloud free AIRMSPI-AERONET collocated step-and-stare data (all flights)

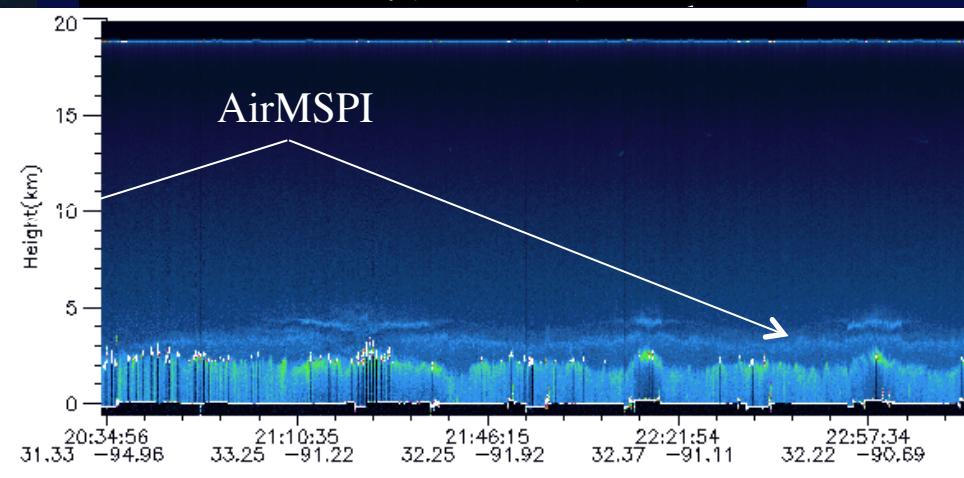

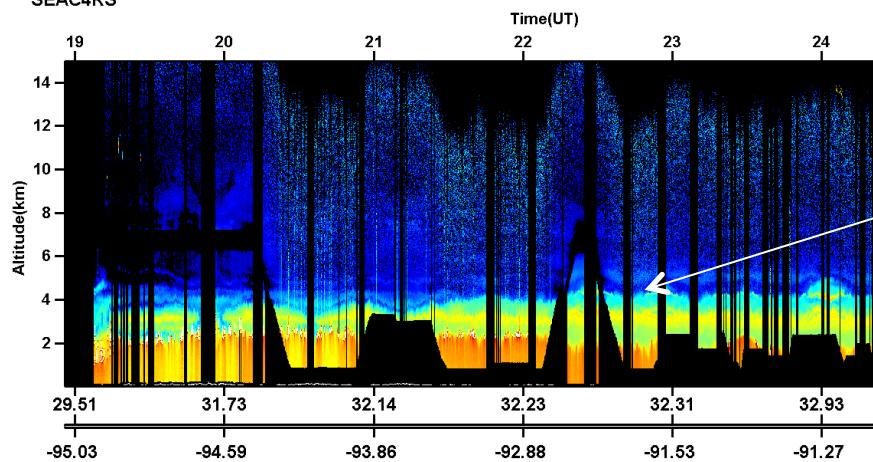

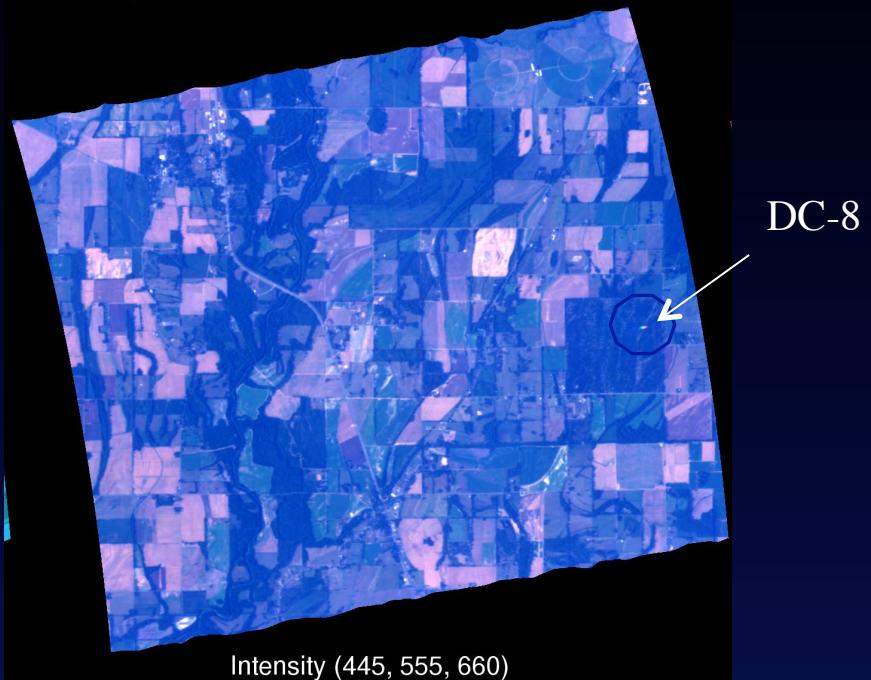

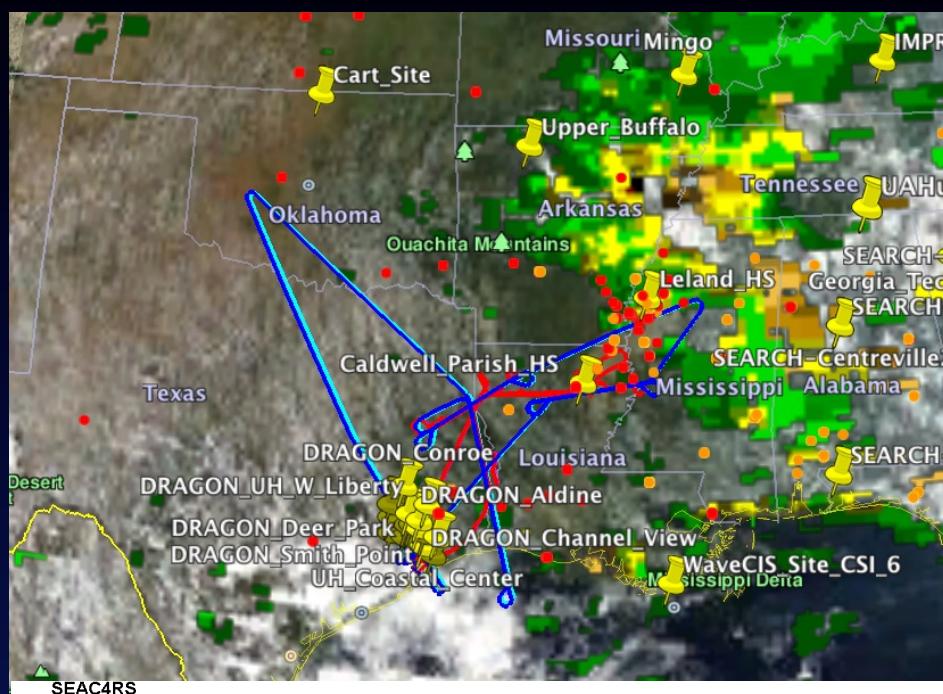

Cloud-free step and stare AirMSPI-AERONET collocations: 6

Work in progress is to inter-compare aerosol properties from AirMSPI with AERONET inversions and DC-8 measurements

Additional AirMSPI&DC-8 aerosol collocations

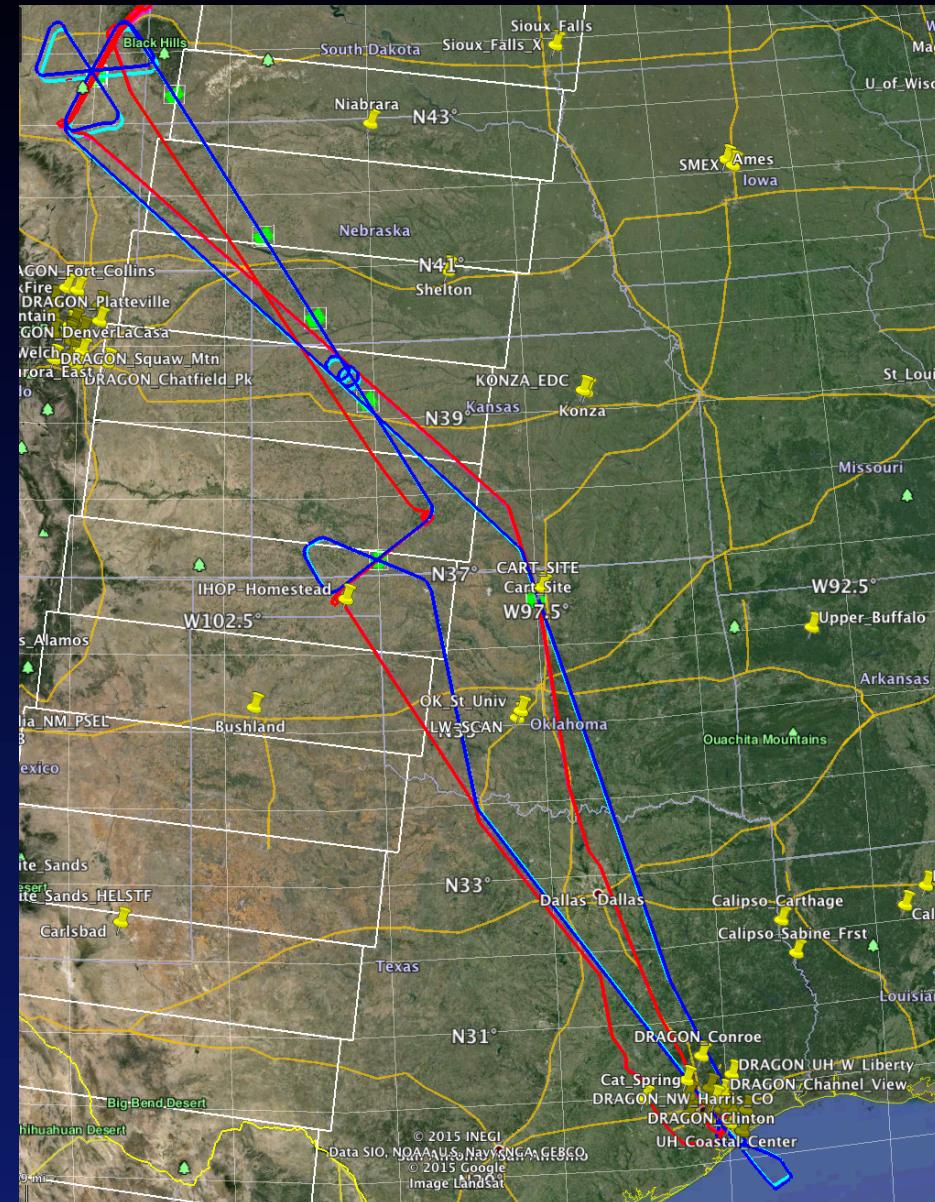

- AirMSPI Step-and stare
 - August 6th: Del Norte, 21:48:27, 22:09:15, 22:28:22
 - August 16th: Fowler, 19:06:12 – DC-8 profiles
 - August 19th: Thunder Basin & Kansas, 18:06:02 to 20:57:55
 - August 23^d: SouthEast Arkansas, 16:12:15 and 19:40:15
- AirMSPI Sweeps:
 - August 6th: 20:40:40, Oregon fires
 - August 8th: 22:47:07, Dust over the Ocean

August 16th, 2013, 19:06Z – Jeff's case

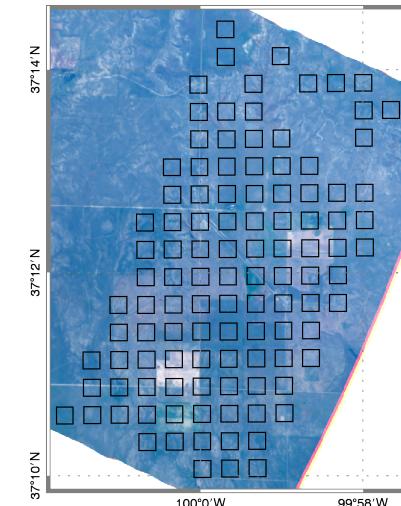

DC8 profiles are available

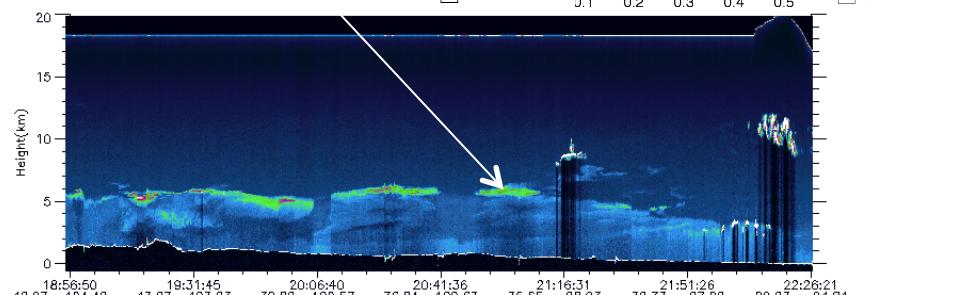

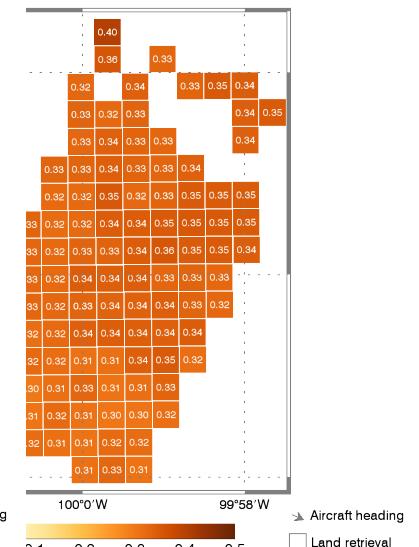

August 19th, 2013 – Ralph's case

AirMSPI, 2013-08-19T20:57:00Z, SouthwestKansas

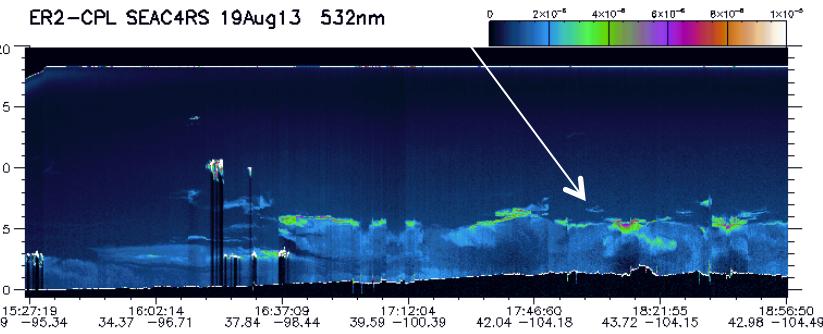

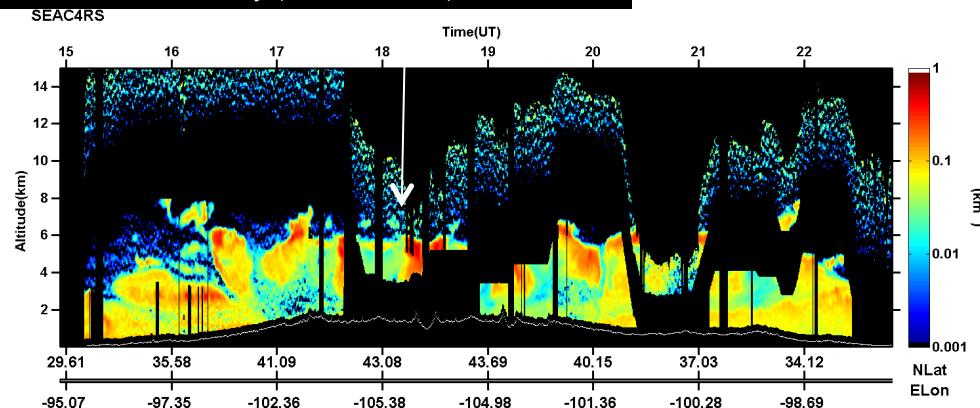

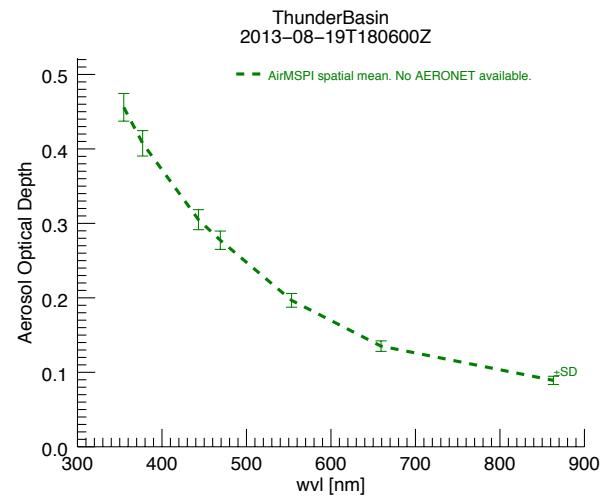

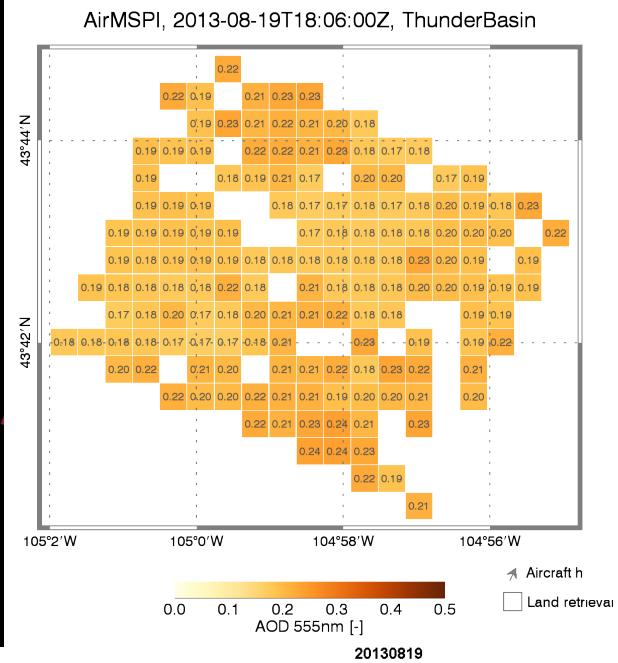

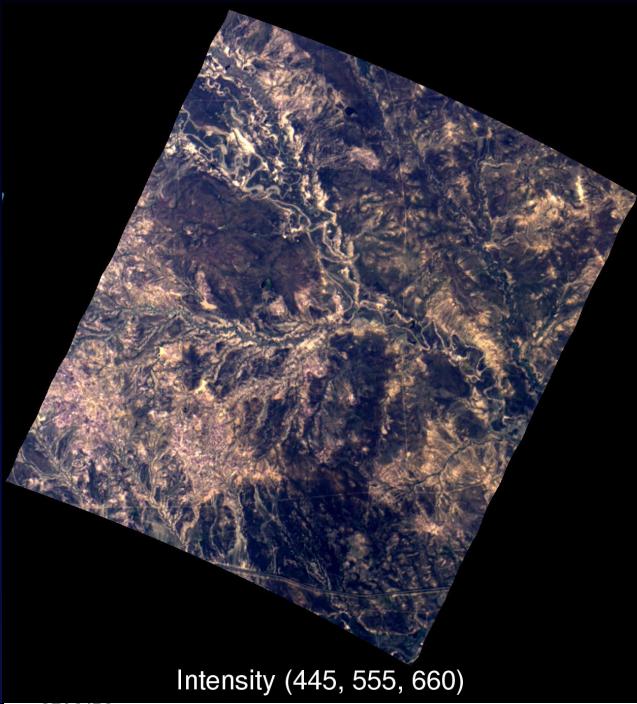

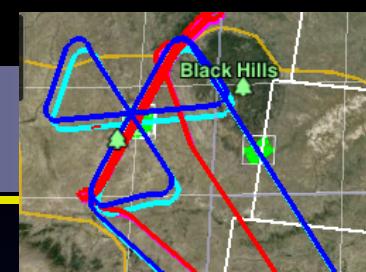

8-19T20:57:00Z, SouthwestKansas

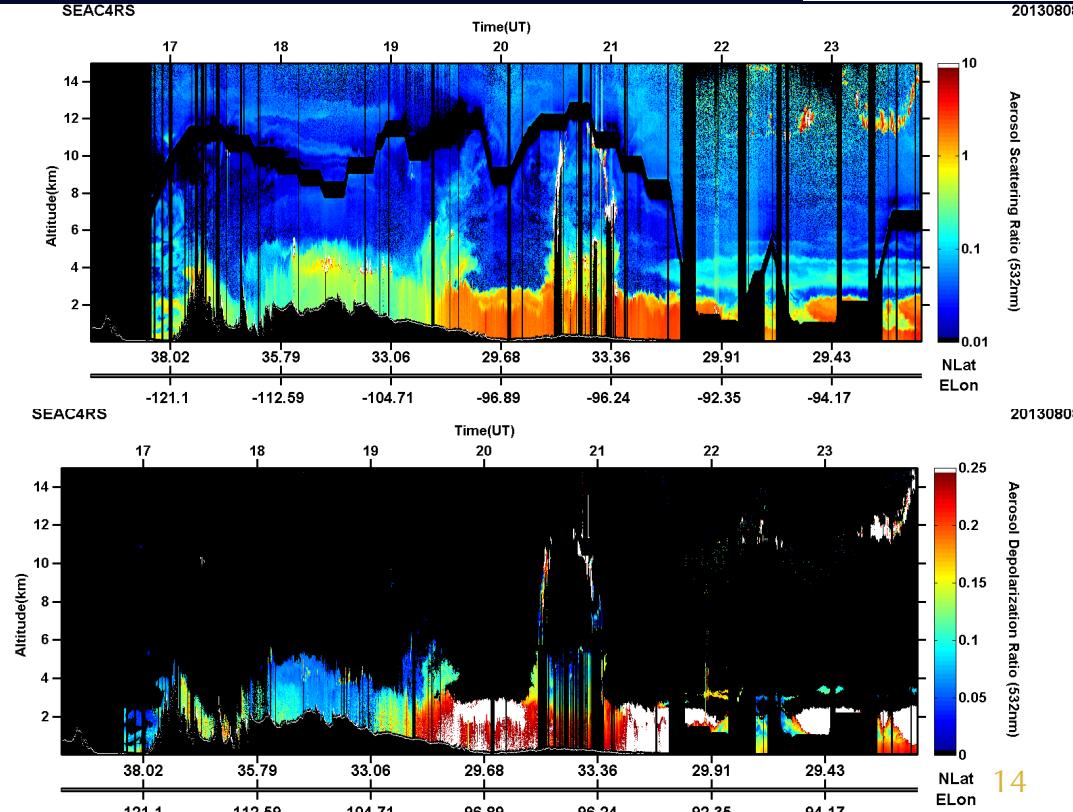

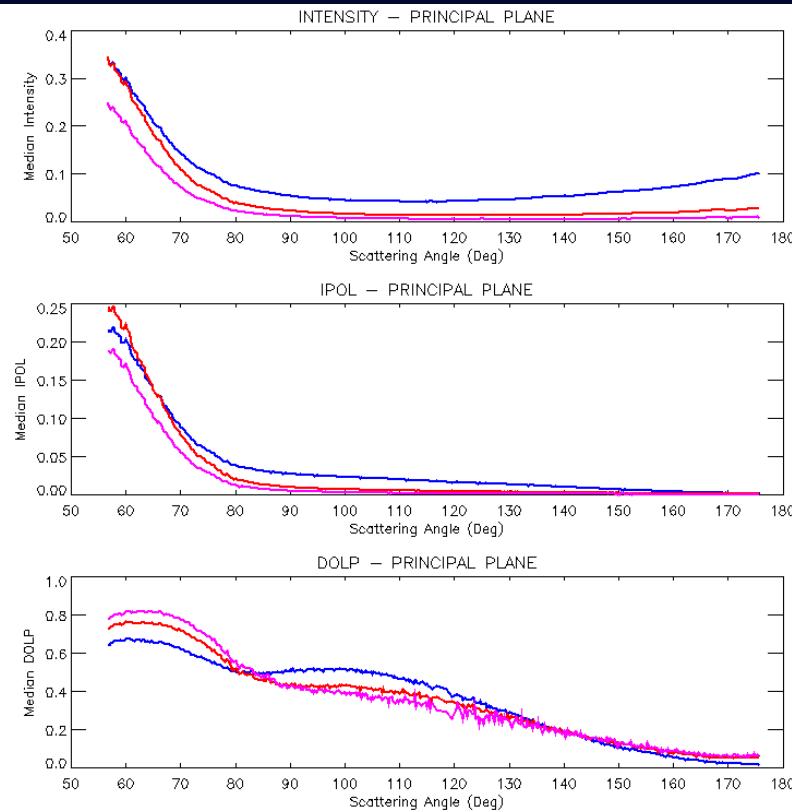

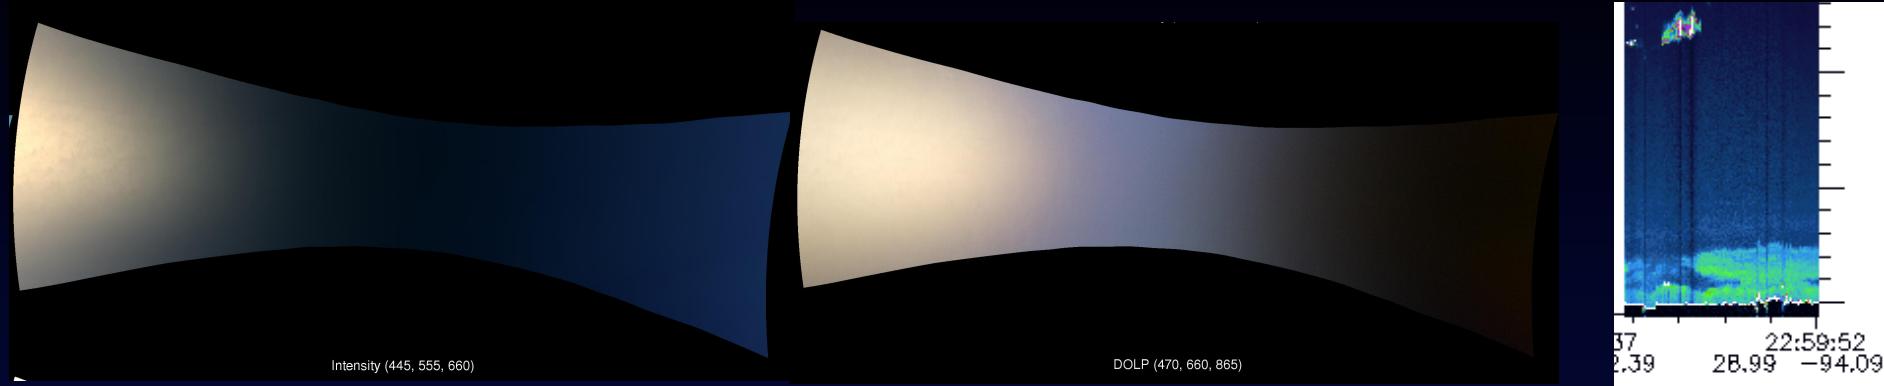

7 AirMSPI-DC-8 collocations:

- Lamont 16:23:30 – some clouds
- Thunder Basin (4) 18:06-19:11
- Southwest Kansas (2) 20:36, 20:57

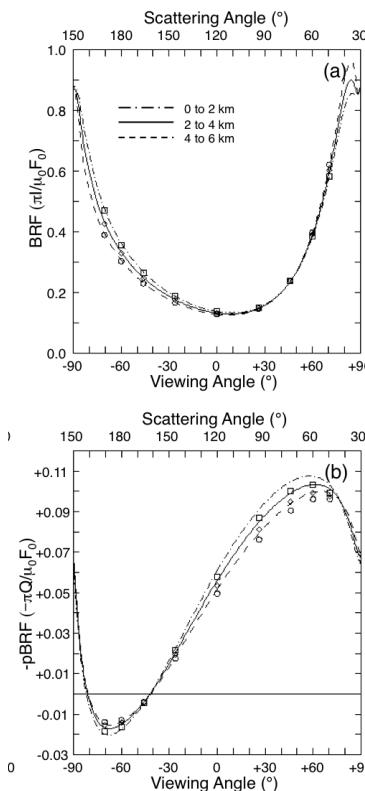

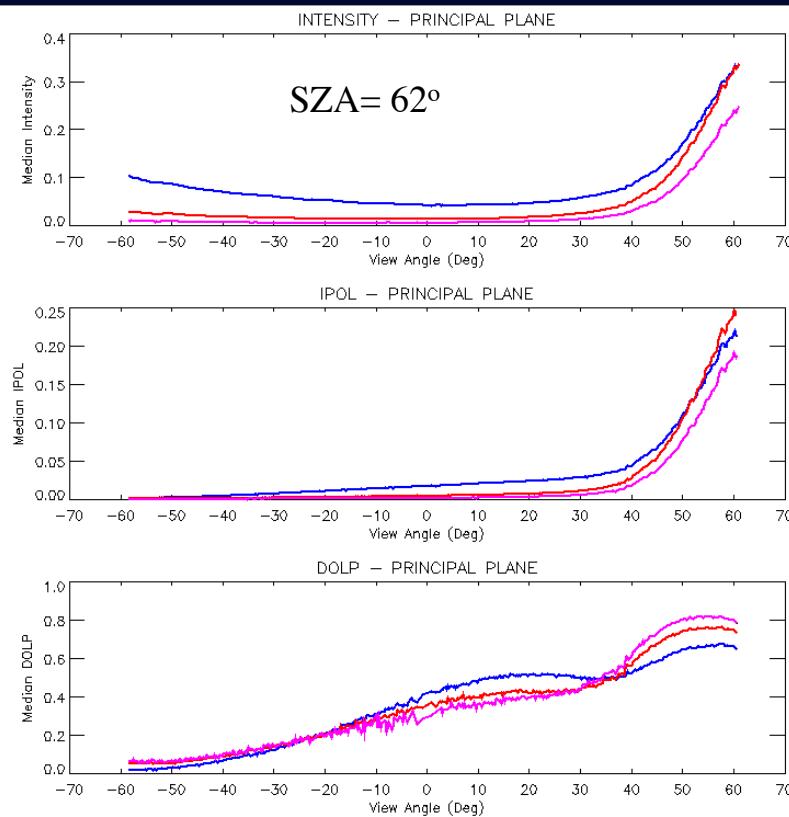

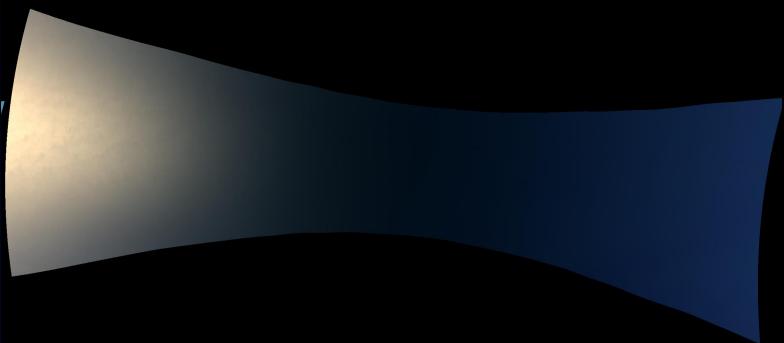

August 19th, 2013, 18:06Z – Ralph's case

August 8, 22:42-22:52 Dust over clear Ocean

August 8, 22:42-22:52 Dust Over Clear Ocean

Kalashnikova et al., 2011

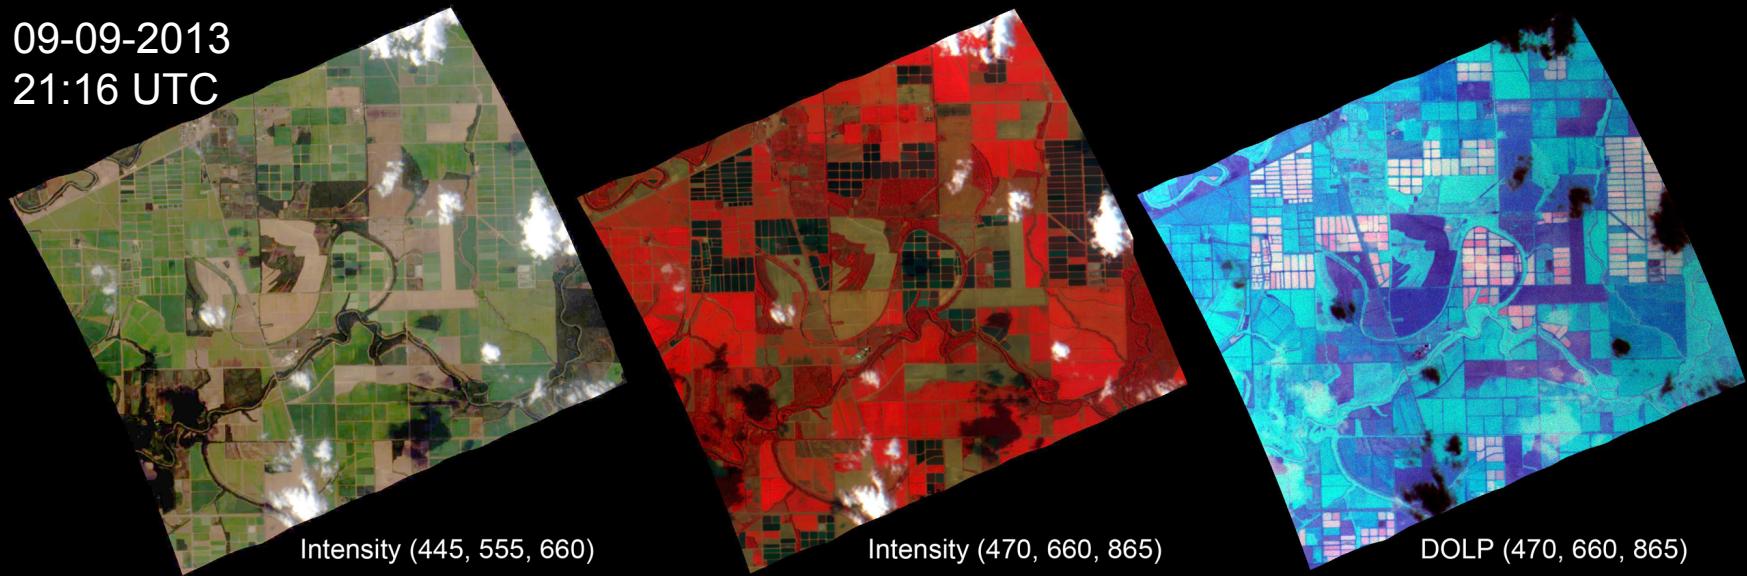

SZA = 60°,
Principal plane
AOD=0.5
 $\lambda=445\text{nm}$

Summary

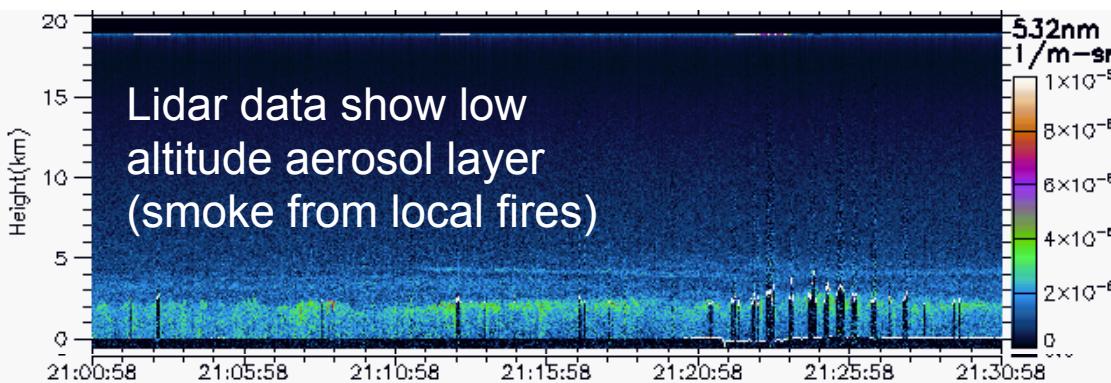

- Complete SEAC⁴RS dataset (L1B2 products) are available at:
https://eosweb.larc.nasa.gov/project/airmspi/airmspi_table
- Initial AirMSPI aerosol retrieval results from SEAC⁴RS are consistent with AERONET and 4STAR observations
- SEAC⁴RS data provides an excellent opportunity for new polarimetric retrieval validation, and for evaluating polarimetric contributions to the study of aerosol direct and indirect effects
- Please consider submitting to AGU session: “Advances in Atmospheric Aerosol and Cloud Characterization”

September 9th: Near Leland_HS

09-09-2013
21:16 UTC

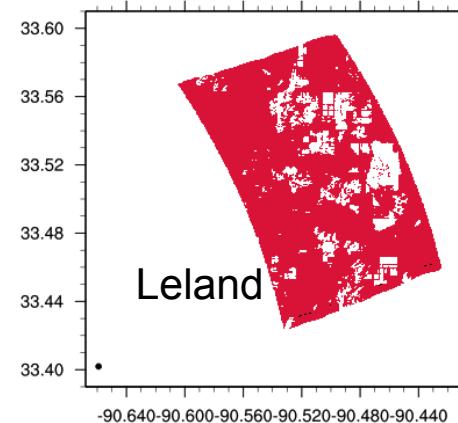

CPL backscatter

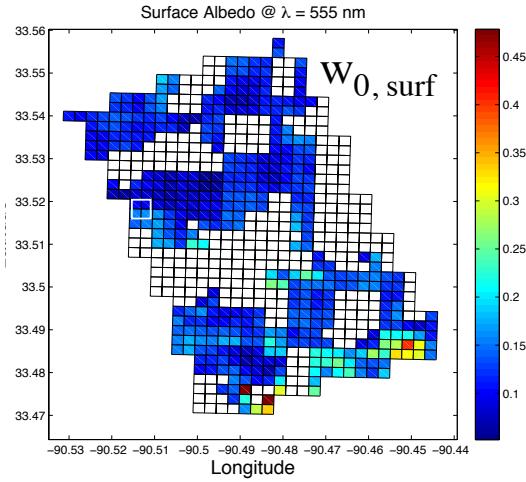

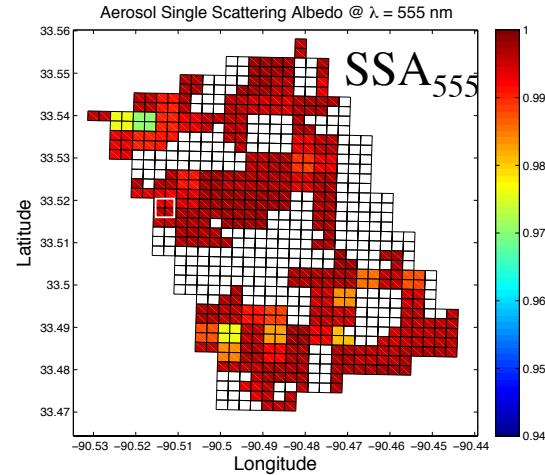

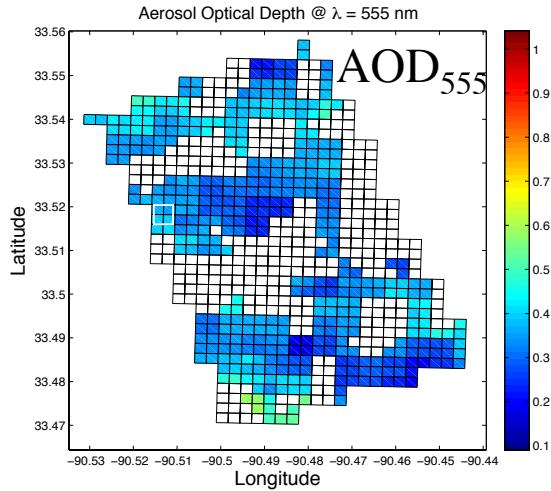

Absorbing Aerosol Index calculated using UV bands
 $\text{A.I.} = -100 \times [\log_{10}(I_{355}/I_{380})_{\text{meas}} - \log_{10}(I_{355}/I_{380})_{\text{calc}}]$

indicates the presence of absorbing aerosols
